Figure 6

Figure 6 shows the results of the experiment. The spots are arranged in a 4x4 grid. The columns are labeled A, B, C, D from left to right. The rows are labeled 1, 2, 3, 4 from top to bottom. The concentrations in nanomoles per liter are: Column A (0, 40, 20, 10, 5, 0), Column B (0, 0, 40, 20, 10, 5, 0), Column C (0, 40, 20, 10, 5, 0), and Column D (0, 40, 20, 10, 5, 0). The spots in the plate correspond to these concentrations, with higher concentrations showing more intense spots.

Figure 7

Figure 7 shows a checkerboard pattern of light and dark spots in a 16-well microplate. The plate is labeled with 'A D A D A D A D' vertically on the right and '0 40 20 10 5 0 0 40 20 10 5 0' horizontally at the bottom. The text 'Nanomoles per liter' is centered below the horizontal labels.
